

Wednesday, November 4, 2009, 8:15 A.M. ET

In October, construction employment dropped 51,000, the smallest decline since July of 2008. This was its thirty-third consecutive monthly decline, and brings the total decline in construction jobs since the peak in January 2007 to 1,675,000. Employment in the financial services sector dropped 18,000, the twenty-third consecutive monthly decline.

Monthly Changes of Employment in Construction and Financial Activities

About the *ADP National Employment Report*[®]

The *ADP National Employment Report*, sponsored by ADP[®], was developed and is maintained by Macroeconomic Advisers, LLC. It is a measure of employment derived from an anonymous subset of roughly 500,000 U.S. business clients. During the twelve month period through June 2009, this subset averaged approximately 400,000 U.S. business clients and over 23 million U.S. employees working in all private industrial

National Employment Report

sectors. The data is collected for pay periods that can be interpolated to include the week of the 12th of each month, and processed with statistical methodologies similar to those used by the U.S. Bureau of Labor Statistics to compute employment from its monthly survey of establishments. Due to this processing, this subset is modified to make it indicative of national employment levels; therefore, the resulting employment changes computed for the *ADP National Employment Report* are not representative of changes in ADP's total base of U.S. business clients.

For a description of the underlying data and the statistical properties of the series, please see "*ADP National Employment Report: Development Methodology*" at <http://ADPEmploymentreport.com/methodology.aspx>.
